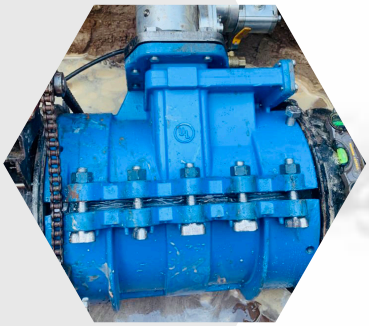
Water Is In Safe Hands With The AVT EZ Valve

In support of the framework contract with Severn Trent Water, the AVT EZ Valve will be supplied for pipeline emergencies, however, this product can also be used beyond water utility companies.

This versatile product has been utilised by hospitals, in order to keep water flowing whilst emergency repairs take place. Adapted to remain undamaged when holding up to 120 degrees of water, this is the perfect product to undertake maintenace in such an essential setting.

Available in 3" to 24" sizes, the 'live valve insertion' is an extremely quick and effective installation process. It doesn't require water flushing, chlorinating or sampling. Installing with a single excavation (excluding line stops or bypasses) not only reduces time and cost, but the AVT EZ Valve also provides organisations with immediate and on-going control of the pipeline. More importantly, this innovative product prevents customer interruptions to water supplies and reduces customer minutes lost.



Thousands of homes remain with water, due to the AVT EZ Valve installation.

Operations Director, Paul Rodgers, added, "Providing businesses and hospitals with the support necessary to fulfil their role as well as their customer/patient needs, gives all employees at R2M Ltd an immense sense of pride. Our rapid response, in partnership with R2M Site Services Ltd, is beyond compare, with dedicated teams available 24/7, 365 days a year.'
