

900mm Multigrips fitted to 900mm PE – Stoney Stratford Reinforcement Main

Late in 2015 no. pupped PE flange adapter had failed during testing and commissioning of a new 900mm pipeline in old Stratford, Milton Keynes. R2M were called and offered a retrofit solution of long bodied Nova Siria Multigrip slip couplings with full end restraint, to be installed. The failing PE flanges were cut out and side of the pipe, lifted upwards so that the long bodied Multigrips could be installed and slid into place. The extra length of the body then covered the missing section of pipe where the PE flanges had been removed

The Multigrips were installed with the assistance of R2M's technical support team and despite the considerable challenges presented by the pipe where had sever ovality, a full test was achieved even at the lowest elevation of the pipeline where 16 bar was necessary. Below are comments from the Andy of Anglian water who were the ultimate client

Gents

Just a quick note to thank you for your support in bringing this project to a successful conclusion. We really appreciate your response and dedication to the problems we encountered in trying to get a successful pressure test from this main.

I will certainly be providing positive feedback on R2M Nova Siria fitting within our business and also to our client

Regards.....Andy
