

Why Go Bespoke?

When we hear the words 'bespoke products' for unconventional pipeline issues, it's natural to think it will take longer and cost more. But this isn't always the case.

Manufacturing and installations times have been reduced to 24 hours! They can be made to fit horizontal and vertical pipelines, in any shape or size, at height or within deep excavations.

When pipe fittings are tailor made, you can rest assured that there will be no leakage issues in the future, thereby saving long term and lowering TOTEX costs.

Mark Beesley, Business Development Manager, added, "Bespoke fittings are now just as popular as the off-the-shelf products. We've found that clients aren't afraid to make the decision of buying 'made to measure' for non-standard situations, because they know the materials used are robust, they can be supplied and installed within 24 hours by our partner, R2M Site Services Ltd, and they are also less likely to incur fines for water leakage, due to the products' reliability, longevity, and effectiveness".

At R2M Ltd we also recommend that, should you require any bespoke materials, you consider taking advantage of the mains measuring service by R2M Site Services Ltd, to ensure accuracy throughout the installation process.

For all bespoke fittings, call us 24/7 on 01282778030 or email info@r2mltd.co.uk
